CK KOKATE PHARMACOLOGICAL SCIENCES-BOOK PHARMACOGNOSY / PDF BY C.K.Kokate. \$15.00. Book Description: Pharmacognosy by C.K. Kokate. Pharmacognosy, S. B. Gokhale, A. P. Purohit, C. K. Kokate.Q: Replacing values based on value of multiple columns I have a dataframe where I want to replace values in one column based on values in other columns. So, for example, I want to replace values in the "subscriber_id" column if "log_id" is in one column and "extra_key" is in another. I've tried: data2[data2['log_id'] in data2.extra_keys] = data2['subscriber_id'] and data2['log_id' in data2.extra_keys] = data2['subscriber_id'] and data2.loc[data2['log_id' in data2.extra_keys], data2['subscriber_id']] = data2.loc[data2['log_id' in data2.extra_keys], data2['extra_key']].values[0] but I get an error message ValueError: The truth value of a Series is ambiguous. Use a.empty, a.bool(), a.item(), a.any() or a.all(). A: You can use in here: In [63]: df.loc[df.log_id.isin(df.extra_keys), 'subscriber_id'] = df.extra_key df Out[63]: log_id subscriber_id extra_key 0 1 1 2d92ce491b
