to run on any platform. - Supports iOS (8.0+) and Android (4.0+) devices. - Configure Bluetooth Scanning Mode for automatic in-app scanning. - Browse all nearby devices in a table view. - Filter devices via Bluetooth address, Bluetooth name, or Service Set ID. - Display information about devices in a table view. - Scan all known Bluetooth devices at the same time. - Export device information to clipboard. - Enable or disable Bluetooth scanning. - Shortcuts provide a quick access to common features. - Apply basic Text Filtering. - Automatically show past scan results. - Automatically scroll to the top when a new device is found. -

Automatically scroll to the top when a new device has been detected. - Automatically scroll to the bottom when the scan is finished. - Automatically hide the Main UI to allow for better user experience. - Receive push notifications when a new device is discovered. - Close the current Bluetooth scan window when a new device is found. - Connect to a device in the device table. - Automatically start Bluetooth scanning when the app is opened. - Track and auto-stop all Bluetooth scans. - Exclude specific Bluetooth address from scans. - Support for iOS Development: Apple Swift 4.2, Xcode 10.3, iOS 12.1, XCTest 12.1. -

Support for Android Development: Android Studio 3.1, Android 1d6a3396d6

Description: Actions Actions are actions that you can perform with Medieval Bluetooth Network Scanner. Every action has a set of configurable options and all actions are saved in the configuration file medieval.ini. After you open Medieval Bluetooth Network Scanner you can also define your own actions in the configuration file. Connect to remote devices. Disconnect from remote devices. Send a message to a remote device. Delete an entry from the configuration file. Download a configuration file. Scan the network. Delete an entry from the configuration

file. Show information about a device. Show information about an entry in the configuration file. Show information about a remote device. Show information about a remote device entry in the configuration file. Removes an entry from the configuration file. Show information about your program. Additional information Additional information is about the Medieval Bluetooth Network Scanner. V.0.4.3 Added support for Pin-lock devices (NFC). Added support for Intel/nVidia controllers. Added support for remote entries in the configuration file. Added support for maximum number of scan-requests to devices. Added support for

Android phones. Added support for scanning on Windows 8. V.0.4.2 Added support for iOS. Improved UI. Added support for the Windows Phone 8. Added support for the Android 2.3. Added support for MIME-types. Added support for the Windows Phone 8. Improved UI. V.0.4.1 Added support for the Windows Phone 8. Improved UI. Added support for the Android 2.3. V.0.4.0 Added support for Android 2.2. Improved UI. Changed category names. Reduced the memory-usage of all forms of Bluetooth adapters. V.0.3.3 Added support for the Intel/nVidia Bluetooth controllers. Reduced the memory-usage of all forms of

Bluetooth adapters. Improved UI. Added support for the Intel/nVidia Bluetooth controllers. V.0.3.2 Reduced the memory-usage of all forms of Bluetooth adapters. Improved

What's New In Medieval Bluetooth Network Scanner?

Medieval Bluetooth Network Scanner is a free application that allows you to discover remote Bluetooth devices in range and browse their services. You can search for Bluetooth devices by name, address, or device class. You can browse the services that they offer and select one for further connections. When you select a service, it will send a

PUSH message to the device to ask it to connect. This application can display the Bluetooth address, name, and manufacturer name of discovered devices. DISCLAIMER: MedievalNetworkScanner.com is not affiliated with any of the companies mentioned in this app. All trademarks, logos, and brands are the property of their respective owners. Medieval Bluetooth Network Scanner shows Bluetooth devices and services found around you and lets you connect to it. It's really easy to use. Just press Scan to start a scan, and when you find a Bluetooth device you wish to connect to, simply select it and you can connect to it. If the device does not have a user interface, you can start a connection, and the device will connect automatically. The app offers several

useful features such as: Scan to discover Bluetooth devices and services around you, discover and connect to a device by name, class, manufacturer and device address, view a device's information (name, address and more), browse services, connect to a selected service, and change the scan mode (standard or ad-hoc). One of the most useful features is the scan to discover Bluetooth devices and services around you. You can easily connect to services offered by Bluetooth speakers, headphones, remote controls, and more! Have you ever wanted to know what services are available in a given Bluetooth device, but couldn't find a

program to do it? The Bluetooth Standard for Bluetooth wireless technology is a set of documents describing the Bluetooth device-specific services offered by the device. Each Bluetooth device has a service UUID (unique identifier) and uses that service to communicate with the host device. The Bluetooth Standard is currently published in version 1.0 and defines a total of 72 services. The following list displays the service UUID and its brief description for the Bluetooth device classes that were published in the official Bluetooth standard, Version 1.0. The description section is very important because it

gives you more information about what a given service does, e.g. does it send audio or

System Requirements:

Windows 7/Vista At least 2GB of RAM (4GB recommended) 1GHz CPU (2GHz recommended) 5 GB of available hard drive space DirectX 9.0c 50MB of free video RAM DirectX 11 compatible video card Windows Media Player 11 compatible sound card At least 1280x1024 resolution And 1.0.3! Version 1.0.3 adds in several major changes! The menu system has been revised and should be much easier to use now
